

## JOYFUL AND TRIUMPHANT

**TET 50215 Pod parent is sdlg x [(sdlg x All Things to All Men) x Soli Deo Gloria]. Pollen parent is Scarlet Pimpernel. 8", 32" (some years it is 36" and others 30"), 4-way branching (3-way when crowded which is what I am showing here in the pics of the scapes), 18 buds (15 when crowded), M (actually halfway between M and LM), Sev (an educated guess, but I will know for sure by February in the GH and will change the registration if needed), fr, no rebloom noted. Red with ivory filigree edge; white ivory. half midribs; green throat. Pollen looks good and it had some grasshopper/bee pods on it, but I won't know for sure on fertility until about May.**
